Software Engineer

I´ve been working in software development with technologies like Angular and NodeJS in the way of full stack developer, currently i´m working like Centers Senior Developer, mostly with most recent versions of Angular, Creating user interfaces, user experience, and responsive pages. However i develop back end activities like support to REST API´s or creating proxy servers, i have experience in different projects, right now working for clients like Telcel with different kind of teams where i have roles like font end, managements of front end development, managment of cloud repository in AWS, when requieres delegate activities and lead session whit clients.
